babyLance is a brand new product designed by neonatal nurses, so you know it’s been made with the best care in mind.
“We have the smallest patients, so we need to make sure we have the gentlest products. babyLance is much kinder than anything we’ve previously used.”

babyLance safety heelsticks are becoming renowned worldwide for their smooth and accurate incisions, ease of use, and safety.

The design has been proven to minimise pain, bruising and trauma to the infant’s delicate heel tissue and nerve endings.

Proven to minimise pain, bruising and trauma
babyLance features the industry’s most effortless activation trigger, which delivers a smooth, precise incision.

Its unique housing provides visual guides for accuracy, and has a secure grip design.

It’s a single-use product and comes in three colour coded sizes: micro-prem, prem and newborn.
JB Medical Supplies is the only Australian company specialising in perinatal care products.

Our original product was the Kiwi OmniCup, the world’s first vacuum delivery system. Today we continue to do whatever it takes to help perinatal care professionals make each delivery as safe as possible for mothers and their babies.

Everything we do, and every product we bring to market, puts mothers and their babies first – their safety, their wellbeing, and their feelings.

It’s our passion, not just our profession.
